EXPERIENCE

IT Developer Bulog Jakarta

As a Frontend Developer, i am responsible for delivering a high quality of user interface and providing a fluent flow of user experience to maintain a great experience on my application. I involved in two main project in bulog itself

Flutter package: Drift DB, FCM, Riverpod, Provider, Hive, Material Design, Animated Container, GoRouter *RPK-Mobile* 2024

Rpk Mobile is an app for store associated with bulog through rpk to buy product from bulog at affordable price

- Built with Flutter
- Implementing a full flow of transaction, from login all the way through payment
- Handling state with Provider, for handling state at ease
- Handling file with file picker and image picker to gain access to media, file, and client camera

RPK Point of Sale

2024

Rpk POS is an app for helping the user of RPK to maintain the inventory of their store and printing receipt for the customer of each RPK store

- Built with flutter
- Implementing a full offline flow to make no async call while handling cashier, to prevent laggy behavior since internet doesn't spread evenly across indonesia, using Hive for flutter
- Handling a full user flow all the way from login, store open session, and etc that we used to see in pos app.
- Handling receipt printing using bluetooth printer.
- Handling some animation to make the app seems more fluid

Banpang information system

2024

A collaboration information system between Bulog and Badan Pangan to make a information system to handle distribution documentation

- Built with Next js as Frontend and Prisma as API
- Successfully used for 100+ user across indonesia, from bulog and its transporter
- Responsible for creating a rekapitulasi dokumen
- Handling algorithm for rekapitulasi, so user can create the rekapitulasi of data without adding the data manually
- Adding filter for rekapitulasi list and draft rekapitulasi so user can search the data with ease

Banpang mobile

2024

Banpang mobile handles the validation of data so it can be validated later in banpang information system

- Built with Flutter as Frontend and Prisma as API
- Successfully used for 100+ user across indonesia
- Handling data, with or without connection, after successfully delivering product to citizen

Klik SPHP

2024

Klik SPHP is an application to handle the e-commerce between Perum Bulog and its partner to sell cheap-high quality rice throughout indonesia

• Built with Flutter

- Refactoring and rebuilding the previous application built with ioniq
- Using FCM to notify user from backend

COMPUTER KSN-K TRAINER

Jakarta

KSN (Kompetisi Sains Nasional) is an annual event held by Kemendikbud as a competition for schools to compete among the student from across the state of Indonesia

 Helding a meeting to teach College Students about Algoritma Struktur Data and responsible for creating problems for final evaluation. And also taking notes and score as a report for the responsible lecturer

Pemrograman Berorientasi Objek Practicum Assistant

2022

Helding a meeting to teach College Student About Pemrograman Berorientasi Objek and was
responsible for creating problems for final evaluation. And also taking notes and score as a report for
the responsible lecturer

Project Manager Aceh

As a project manager, I have experience in leading the development of a website for groceries named Pakthani using Next.js and Django. I oversaw the implementation of the project from the planning stages to the deployment on Netlify. I was responsible for coordinating the work of the development team, ensuring that the project was completed on time and within budget. I also worked closely with the client to gather requirements and provide regular updates on the progress of the project. Additionally, I was responsible for testing and quality assurance, making sure that the website was fully functional and met the client's needs. Overall, my experience in building a website using Next.js and Django and deploying it on Netlify has been a success, delivering a high-quality product to the client.

Pertamina New Venture Internship

Jakarta

As an intern, I learnt a lot in Pertamina. I work in a team called pertavolt, which is responsible for an electric generator to provide electricity for portable electric devices. I work as a programmer, to maintain the stability of the website and helping my team to gather data using data scraping method with python from any website. I was participating in some important meeting in order to know the product well.

PROJECT

Super Health App Jakarta

Website for tracking your health progress. A Capstone Project to graduate from Kampus Merdeka held by Kemendikbud. This website is built with React JS as its main front-end library. Website for tracking your health progress. A Capstone Project to graduate from Kampus Merdeka held by Kemendikbud. Creating a health tracking website with a BMI calculator, calorie calculator, and rest timer can be challenging but rewarding. It involves designing layout, programming features, ensuring accuracy of calculators and creating a user-friendly design. It requires technical expertise and design skills.

Sistem Informasi Sidang Ilmu Komputer Universitas Pertamina

Jakarta

Website for scheduling final thesis defense and an integrated platform for college student, lecturer, and administrator to submit, giving feedback, and evaluate every document required for final thesis on a single website with different roles. This project also implements a scheduling algorithm in order to reduce the workload of administrators of Universitas Pertamina. The website itself is built with svelte as its front-end library and firebase to handle database and back-end for database communication. The purpose of this website primarily as a requirement for my final thesis.
